

Bio-Algihum[®] „Terratop[®] Fairway plus“

Product type (compound granular)

An innovative compound organic mineral fertilizer with fast and slow release nitrogen sources.

Excellent starter combined with slow release nitrogen sources

An environmentally friendly fertiliser, contains no nitrate, which reduces leaching, the nitrogen is broken down by the soil microbes, ensuring a slow release by comparison to mineral fertilisers.

Areas of application

- Fairways and sports fields
- Tees and surrounds

Mode of Action

Outstanding starter fertiliser based on fast and slow release N forms.

Optimal utilization of the Nitrogen through slow release, lasts up to 11-15 weeks

Continuous N mineralization over a longer period based on the humates and organic carbon, combined with high quality mineral nutrients, which ensures maximum uptake by the plants.

Contains slow release potassium and 10 % organic substances.

The micro- and macronutrients contained in the natural raw materials and especially their interactions promote sustainable microbial activity.

The natural slow release of the nutrients prevents growth flushes and reduces leaching.

Encourages a healthier and deeper rooting system

Application method and rates

Apply to a dry sward. Easily applied with all conventional fertiliser spreaders. Irrigate after applying to ensure nutrient dispersal.

- Spring/summer rates and newly seeded areas
25-45 g/m² (2,5 kg-4,5 kg pro 100 m²)
- Autumn Fertilising
25-35 g/m² (2,5 kg-3,5 kg pro 100 m²)

„Terratop[®] Fairway plus“ should be applied in the growing season between April and September.

Fertiliser Analysis

organisch-mineralischer NPK-Dünger 17+3+8+1Mg

17 % N organic mineral bound nitrogen
 9,4 Ammonia / 0,2 organic N / 4% Urea / 3,9% Methylen Urea

3 % P₂O₅ total phosphate

8 % K₂O soluble potassium oxide

1 % Mg Magnesium

also contains natural bound trace elements

Bio-Algium® „Terratop® Fairway plus“

Type:	Organic mineral NPK fertilizer using organic, vegetable and mineral compounds
Total (N):	17,0 %
Total Phosphate (P ₂ O ₅):	3,0 %
Total Potassium Oxide (K ₂ O):	8,0 %
Total Magnesium (Mg)	1,0 %
Net Weight:	25-kg-bag
Manufacturer/Distributor:	aqua-terra Bioprodukt GmbH Langenselbolder Straße 8 63543 Neuberg Telefon: +49 6183 91 49 00 Telefax: +49 6183 91 49 049 Email: info@aqua-terra.de Internet: www.aqua-terra.de
Starting materials:	Organic minerals fertilizer, algae
Minor ingredients:	38 % organic substances, rated as loss on ignition
Instructions for proper storage:	Unopened bags have a shelf life minimum of 1 year. Store in a cool and dry environment. Protect from moisture erosions and washouts should be avoided. We recommend the wearing of gloves whilst applying the product. Store all packaging out of reach of children and pets.
Instructions for proper use:	The recommendations of the official advice have priority. Reference is made to fertilizer restrictions, fertilizer ordinance and order of movement. Regular applications throughout the growing season. Product can be applied both on wet and dry grass. Spread evenly with a rotary spreader or by hand. Water sufficiently after application so that the granules can dissolve properly.
More information:	Organic Nitrogen The Nitrogen is organically bound and becomes soil and plant available after being broken down with the soil microbes.
